Software Engineering for Novel Architectures (SENA)

# **NOAA Software Engineering for Novel Architectures (SENA) Project**

Leslie Hart  
9/9/2015

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Software Engineering for Novel Architectures (SENA)

## Funding Language

“NOAA will acquire software engineering support and associated tools to re-architect NOAA’s applications to run efficiently on next generation ***fine-grain*** HPC architectures.”

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Software Engineering for Novel Architectures (SENA)

## What is “fine-grain”

From a recent procurement document: “Fine-grain architecture (FGA) is defined as: a processing unit that supports more than 60 concurrent threads in hardware (e.g. GPU or a large core-count device).” *(of course “traditional” architectures are getting to this point as well)*

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

## Software Engineering for Novel Architectures (SENA)

# Overarching Goals

- Prepare codes for a future production architecture
  - Monitor architectural evolution
- Maintain codes in a way that subject matter experts can still modify the code
- Monitor (and participate as appropriate) evolving standards
- Codes should still be viable for current (traditional) architectures
  - It is expected that code optimizations will increase performance on traditional architectures
- Develop expertise within NOAA

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Software Engineering for Novel Architectures (SENA)

## **Leadership Team - NOAA-wide**

Leslie Hart - OCIO

V Balaji - GFDL

Rusty Benson

Mark Govett - ESRL/GSD

Tom Henderson

John Michalakes - NCEP

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

## Software Engineering for Novel Architectures (SENA)

# Priorities

## Models:

WRF (ARW/NMM), MPAS or FV3, GFDL Climate,  
NMMB

## Programming Research:

Algorithm development, Programming approach

## Standards:

OpenACC, OpenMP, LLVM

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

## Software Engineering for Novel Architectures (SENA)

### Challenges

- Lack of standards across divergent architectures
- Large quantity of legacy codes
- Access to developmental platforms
- Uncertainty of performance gains
- Finding qualified staff

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Software Engineering for Novel Architectures (SENA)

## Technical Issues

Language (is Fortran/MPI still the right choice)

Multiple layers of parallelism

Task, Thread, Vector

Memory footprint of current fine-grain devices

Atmospheric codes tend to have little data  
reuse

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

## Software Engineering for Novel Architectures (SENA)

# Implementation

Develop/cultivate relationships with vendors such as Intel, NVIDIA, etc

Work with internal tools such as source-to-source translators to implement single source as much as possible

Work with compiler vendors to ensure directive based approaches are feasible

Develop small test environment coupled with access to larger government funded machines (DOE, NSF, NASA)

Hardware, Compilers, Tools

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

## Software Engineering for Novel Architectures (SENA)

# Status

Funding distributed to GFDL, ESRL/GSD, NCEP

Hiring in process at all three institutions

Acquiring test systems

Beginning/continuing work on models

Evaluating OpenACC and OpenMP versus source-to-source translation

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Software Engineering for Novel Architectures (SENA)

# Synergy

NOAA's Next Generation Global Prediction System  
(NGGPS) Program

NSCI

NOAA is a "Deployment" agency

Develop mission-based HPC requirements to influence the early stages of the design of new HPC systems and will seek viewpoints from the private sector and academia on target HPC requirements (*of course this is a software and hardware problem*)

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Software Engineering for Novel Architectures (SENA)

## Conclusion

The SENA project is just starting, it is an attempt to consolidate and accelerate existing NOAA projects. The efforts and results will be useful even in the event that fine-grain architectures do not become as price/performance competitive as some have anticipated.

***Thank You!***
